## TEST REPORT

**Product** Yanshee Robot

Trade mark **UBTCH** Model/Type reference ERHA101

**Serial Number** N/A

Report Number EED32L00193801 **FCC ID** : 2AHJX-YANSHEE-1

Date of Issue Aug. 26, 2019

**Test Standards** 47 CFR Part 15Subpart C

Test result : PASS

#### Prepared for:

## **UBTECH ROBOTICS CORP LTD** 16th and 22nd Floor, Block C1, Nanshan I Park, No.1001 Xueyuan Road, Nanshan District, Shenzhen City, P.R.CHINA

#### Prepared by:

Centre Testing International Group Co., Ltd. Hongwei Industrial Zone, Bao'an 70 District, Shenzhen, Guangdong, China

Report No.: EED32L00193802 Page 9 of 47

### 6.4 Description of Support Units

The EUT has been tested independently.

#### 6.5 Test Location

All tests were performed at:

Centre Testing International Group Co., Ltd

Building C, Hongwei Industrial Park Block 70, Bao'an District, Shenzhen, China

Telephone: +86 (0) 755 33683668 Fax:+86 (0) 755 33683385

No tests were sub-contracted. FCC Designation No.: CN1164

#### 6.6 Deviation from Standards

None.

### 6.7 Abnormalities from Standard Conditions

None.

## 6.8 Other Information Requested by the Customer

None.

## 6.9 Measurement Uncertainty (95% confidence levels, k=2)

| No. | Item                            | Measurement Uncertainty |  |  |

## Appendix A): 6dB Occupied Bandwidth

## **Test Result**

| Mode | Channel | 6dB Bandwidth [MHz] | 99% OBW[MHz] | Verdict |
|------|---------|---------------------|--------------|---------|
| BLE  | LCH     | 0.7050              | 1.0868       | PASS    |
| BLE  | MCH     | 0.7092              | 1.0849       | PASS    |
| BLE  | HCH     | 0.7072              | 1.0863       | PASS    |

Page 17 of 47

## Appendix B): Conducted Peak Output Power

**Test Result** 

| Mode | Channel | Conduct Peak Power[dBm] | Verdict |
|------|---------|-------------------------|---------|
| BLE  | LCH     | 1.14                    | PASS    |
| BLE  | MCH     | 3.44                    | PASS    |
| BLE  | HCH     | 5.389                   | PASS    |

## Appendix C): Band-edge for RF Conducted Emissions

## **Result Table**

| M | ode | Channel | Carrier Power[dBm] | Max.Spurious Level [dBm] | Limit [dBm] | Verdict |
|---|-----|---------|--------------------|--------------------------|-------------|---------|
| В | BLE | LCH     | 0.468              | -59.541                  | -19.53      | PASS    |
| В | BLE | HCH     | 4.898              | -56.659                  | -15.1       | PASS    |

## **Appendix D): RF Conducted Spurious Emissions**

### **Result Table**

| Mode | Channel | Pref [dBm] | Puw[dBm]                             | Verdict |
|------|---------|------------|--------------------------------------|---------|
| BLE  | LCH     | 0.267      | <limit< td=""><td>PASS</td></limit<> | PASS    |
| BLE  | MCH     | 2.51       | <limit< td=""><td>PASS</td></limit<> | PASS    |
| BLE  | HCH     | 4.631      | <limit< td=""><td>PASS</td></limit<> | PASS    |

## Appendix E): Power Spectral Density

### **Result Table**

| Mode | Channel | PSD [dBm] | Verdict |
|------|---------|-----------|---------|
| BLE  | LCH     | -12.884   | PASS    |
| BLE  | MCH     | -10.531   | PASS    |
| BLE  | HCH     | -8.648    | PASS    |

## Appendix F): Antenna Requirement

#### 15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### 15.247(b) (4) requirement:

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### **EUT Antenna:**

The antenna is integrated on the main PCB and no consideration of replacement. The best case gain of the antenna is 1.5dBi.

| Appendix G):    | AC Power Line Conducted Emission   |
|-----------------|--|
| Test Procedure: | Test frequency range :150KHz-30MHz   |
| ) (             | <ol> <li>The mains terminal disturbance voltage test was conducted in a shielded room.</li> <li>The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a 50Ω/50μH + 5Ω linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.</li> </ol> |
| Cil             | 3)The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane,  |
|                 | 4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the                                  |
| (FI)            | LISN 2. 5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10 on conducted measurement.   |
| Limit:          | Limit (dBµV)   |

| Limit (c   | lBμV)           |
|------------|-----------------|
| Quasi-peak | Average         |
| 66 to 56*  | 56 to 46*       |
| 56         | 46              |
| 60         | 50              |
|            | 66 to 56*<br>56 |

<sup>\*</sup> The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz to 0.50 MHz.

NOTE: The lower limit is applicable at the transition frequency

#### **Measurement Data**

An initial pre-scan was performed on the live and neutral lines with peak detector.

Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected.

Product : Yanshee Robot Model/Type reference : ERHA101

**Temperature** :  $24^{\circ}$  **Humidity** : 52%

#### Note

- 1) Through Pre-scan Non-hopping transmitting mode and charge+transmitter mode with all kind of data type, find the DH5 of data type is the worse case of GFSK modulation type in charge + transmitter mode.
- 2) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level =Receiver Reading -Correct Factor

Correct Factor = Preamplifier Factor - Antenna Factor - Cable Factor

#### **Test Procedure:**

#### Below 1GHz test procedure as below:

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, whichwas mounted on the top of a variable-height antenna tower.
- c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

#### Above 1GHz test procedure as below:

- g. Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber and change form table 0.8 meter to 1.5 meter( Above 18GHz the distance is 1 meter and table is 1.5 meter).
- h. Test the EUT in the lowest channel ,the middle channel ,the Highest channel
- i. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is worse case.
- j. Repeat above procedures until all frequencies measured was complete.

#### Note

- 1) Through Pre-scan Non-hopping transmitting mode and charge+transmitter mode with all kind of data type, find the DH5 of data type is the worse case of GFSK modulation type in charge + transmitter mode.
- 2) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level =Receiver Reading -Correct Factor

Correct Factor = Preamplifier Factor - Antenna Factor - Cable Factor

3) Scan from 9kHz to 25GHz, the disturbance above 13GHz and below 30MHz was very low, and the above harmonics were the highest point could be found when testing, so only the above harmonics had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported.

## PHOTOGRAPHS OF TEST SETUP

Test model No.:ERHA101

Radiated spurious emission Test Setup-1(Below 30MHz)

Radiated spurious emission Test Setup-2(Below 1GHz)

Report No.: EED32L00193802 Page 46 of 47

Radiated spurious emission Test Setup-3(Above 1GHz)
